PROJECT BRIEF

Digital Literacy Project Brief

Course Code: CSE0001

Course Title: Digital Literacy

Project Type: Digital Literacy Portfolio

Deadline: 31st March 2026

Objective

The objective of this project is to develop essential digital literacy skills among students and help them build a professional digital presence. Through this project, students learn to use digital tools effectively, communicate professionally, collaborate online, and understand cyber safety practices. The project also helps students create a structured digital portfolio that can be used throughout their academic and professional journey.

Key Deliverables

Task 1 – Digital Literacy Infographic

- Create a one-page infographic explaining digital literacy using Canva or any design tool.
- Upload the infographic screenshot and include a short reflection in the project report.

Task 2 – Student Digital Portfolio

- Create accounts on GitHub, LinkedIn, and one additional platform.

- Upload screenshots and describe how these platforms will be used in future.

Task 3 – Coding & Collaboration Platforms

- Complete one beginner challenge on HackerRank or similar platform.
- Create a Google Form quiz and upload screenshots of the form and responses.

Task 4 – Professional Email & Digital Etiquette

- Draft two professional emails and create a social media checklist.
- Upload files and write a short reflection on digital communication.

Task 5 – Cybercrime Case Study & Prevention Guide

- Write a cybercrime case study and create a prevention checklist.
- Upload both files and include a short learning reflection.

Final Output

The final submission will be a **GitHub repository** containing all five task folders, screenshots, and supporting files along with a **project report**. The repository should be properly organized and include a README file.

Learning Outcomes

Students will develop essential digital literacy skills, build a professional online presence, and improve digital communication. They will also learn to use collaboration tools, coding platforms, and follow cyber safety practices.

TASK 1: Create a Digital Literacy Awareness Infographic

Digital Literacy Awareness poster

Write up

I created a Digital Literacy Awareness infographic using Canva, which is a free and user-friendly design tool. Canva provided a variety of templates, icons, and layout options that made it easier to organize information visually and present it in an attractive manner. The infographic was designed as a single poster that highlights the importance of digital literacy for students. The poster covers key topics such as what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

In the infographic, I briefly explained digital literacy as the ability to use digital tools and the internet safely and effectively. I also included examples of useful digital tools like Google Drive, Zoom, and Canva that students commonly use for academic purposes. Additionally, I added safe internet practices such as creating strong passwords and avoiding suspicious links. The infographic also emphasized maintaining a professional online presence and following proper email etiquette while communicating with teachers and professionals.

While creating the infographic, the most challenging part was selecting the right layout and organizing the information without overcrowding the design. However, Canva's templates and design elements made the process easier and more interesting. This task helped me improve my digital design skills and understand how visual communication can effectively spread awareness about digital literacy.

TASK 2 :Build Your Student Digital Portfolio

KAGGLE

The image shows the Kaggle user dashboard for a user named SHRESTHA 25BAC10015. The dashboard includes a sidebar menu with options like Home, Competitions, Datasets, Models, Benchmarks, Game Arena, Code, Discussions, Learn, More, Your Work, and VIEWED. The main content area displays a welcome message, login streak (2 days), tier progress (0% to Expert), and public activity. Below this, there are statistics for Datasets (0 total created), Notebooks (0 total created), Competitions (0 total joined), Discussions (0 total posted), and Courses (0 total completed). A section titled 'How to start: Choose a focus for today' is also visible.

GITHUB

The image shows the GitHub profile page for a user named shrestha25bac10015-netizen. The profile includes a bio, a profile picture, and a list of popular repositories. The first repository is 'Student-stress-analysis', which is a data-driven analysis of sleep, study load, and lifestyle among students. The page also displays a contribution graph showing 8 contributions in the last year, with a calendar view for the months of March, April, May, June, July, August, September, October, November, December, January, February, and March. The user's profile is currently set to 'Public'.

Write up

I created professional accounts on GitHub, LinkedIn, and Kaggle to build my student digital portfolio. These platforms help students create an online presence and showcase their academic and technical skills. On GitHub, I created my profile README including my name, branch, year, and a short description of my learning goals. This platform will help me upload projects, assignments, and coding work throughout my academic journey.

I also created and updated my LinkedIn profile by adding my education details, including my current degree, institution, and expected graduation year. LinkedIn is my preferred platform because it helps build professional connections, explore internship opportunities, and stay updated with industry trends. I plan to actively use LinkedIn to connect with professionals, share achievements, and learn from others over the next four years.

Additionally, I created a Kaggle account to explore data science and machine learning competitions in the future. I plan to gradually improve my skills and participate in beginner-level challenges. Creating these profiles helped me understand the importance of maintaining a professional digital presence.

TASK 3: Explore Coding & Collaboration Platforms

Part A – Coding Practice

For the coding practice task, I created an account on HackerRank and completed a beginner-level challenge. After completing the problem, I received stars on my profile, which indicates my progress and performance on the platform. I took a screenshot of my completed challenge and uploaded it to the task-3-platforms folder. Using HackerRank helped me understand basic problem-solving techniques and improved my logical thinking skills. I plan to continue solving beginner-level problems regularly to strengthen my programming knowledge and prepare for coding interviews in the future.

Part B – Google Workspace Collaboration

For the collaboration task, I created a Google Form consisting of five questions related to Digital Literacy Awareness. The form included multiple-choice questions and a short answer question. I shared the form link in the README file and added screenshots of the form and response sheet. This activity helped me learn how to collect responses and analyze data, which will be useful for academic surveys and collaborative projects.

TASK 4: Draft a Professional Email & Etiquette Guide

Part A – Professional Email Writing

For this task, I drafted two professional emails following proper email etiquette. The first email was written to a professor requesting an extension for an assignment submission. The email included a clear subject line, respectful greeting, brief explanation, and a professional closing. The second email was written to an internship coordinator expressing interest in a summer internship opportunity. In this email, I introduced myself, mentioned my academic background, and expressed my interest in gaining practical experience. This task helped me understand how to communicate professionally and maintain a respectful tone in formal emails.

Part B – Social Media Do's and Don'ts Checklist

For the second part, I created a Social Media Do's and Don'ts checklist and added it as a separate file in the Word document inside the task-4-email-etiquette folder. While creating the checklist, I found it slightly difficult to decide which points were most relevant for college students. However, this activity was interesting because it made me more aware of responsible social media usage and the importance of maintaining a professional online presence.

TASK 5: Cybercrime Awareness Case Study & Prevention Guide

Part A – Case Study

For this task, I selected UPI/Online Payment Fraud as the cybercrime topic and wrote a detailed case study explaining what the crime is, how it typically happens step-by-step, who is usually targeted, and the consequences faced by victims. I created a realistic scenario to demonstrate how fraudsters trick users into approving payment requests or scanning fake QR codes. After completing the case study, I saved it as a separate file and added it to the task-5-cybercrime folder in my repository. This task helped me understand how common digital payment frauds have become and the importance of being aware while using online payment platforms.

Part B – Prevention Checklist and Reflection

For the second part, I created a Stay Safe Online prevention checklist with multiple safety tips, including financial and UPI-related precautions. I also included reporting channels such as the National Cyber Crime Portal and Helpline 1930, and saved the checklist as a separate file in the task-5-cybercrime folder. While researching this topic, I was surprised by how easily users fall victim to fake payment requests. After completing this task, I decided to always verify payment requests carefully before approving them.
